

◆ Prompt Models by Modality

Modality	Framework	Structure	Best Use
Text	CRTF	Context → Role → Task → Format	Dev, writing, reasoning
Image	SREF	Subject → Style → Environment → Frame	Midjourney, DALL·E
Image (advanced)	SCENE	Subject → Composition → Environment → نور/lighting → Effects	Cinematic images
Video	MOTION	Subject → Action → Camera → Environment → Motion → Style	AI video (Runway, Sora)
Video (loop/cinematic)	SCAMPS	Scene → Camera → Action → Mood → Physics → Style	Cinematic loops
Audio	VOICE	Speaker → Tone → Content → Pace → Effects	TTS / voice AI
Code	SPEC	System → Problem → Expectations → Constraints	Clean dev output
AI Agents	ReAct Flow	Think → Act → Observe → Repeat	n8n, automation
Chatbot	RAG + Few-shot	Context → Examples → Query	Smart responses

🔥 1. TEXT (CRTF) — your base model

Context: I'm building a SaaS dashboard

Role: You are a senior UI/UX designer

Task: Suggest a clean layout structure

Format: Bullet points with sections

2. IMAGE GENERATION (SREF)

◆ SREF = best simple model

Subject: A lone warrior sitting on a mountain

Style: cinematic, ultra-realistic, blue tones

Environment: night sky with a glowing blue moon

Frame: wide shot, back view, centered composition

◆ SCENE (more control)

Subject: Two lovers sitting side by side

Composition: back view, centered, silhouettes

Environment: mountain peak, huge blue moon

Lighting: soft moonlight, high contrast shadows

Effects: wind blowing clothes, subtle mist

👉 Use this for Midjourney / DALL·E when you want precision.

3. VIDEO GENERATION (MOTION)

This is what you needed for your cinematic idea 👉

Subject: Two people sitting side by side

Action: sitting still, looking at the moon

Camera: static wide shot, no movement

Environment: mountain peak under a giant blue moon

Motion: wind gently moving clothes and hair

Style: cinematic, soft lighting, dreamy atmosphere

4. CINEMATIC / LOOP VIDEO (SCAMPS)

Best for looping videos like you asked before:

Scene: two silhouetted lovers on a mountain peak under a blue moon

Camera: fixed wide shot, no zoom or pan

Action: minimal movement, just sitting

Mood: calm, emotional, dreamy

Physics: continuous wind effect, flowing hair and clothes

Style: cinematic, seamless loop, start matches end

This is **exactly the model for looping scenes**

5. AUDIO / VOICE (VOICE)

Speaker: calm male narrator

Tone: deep, emotional

Content: a poetic line about love under the moon

Pace: slow and smooth

Effects: light ambient background sound

6. CODE (SPEC)

Better than CRTF for dev:

System: React + Tailwind

Problem: Build a responsive navbar

Expectations: mobile + desktop support

Constraints: no external libraries, clean code only

7. AI AGENTS / AUTOMATION (ReAct)

Perfect for your **n8n workflow**

Goal: Process form submission and generate content

Step 1: Receive webhook data

Step 2: Analyze input

Step 3: Generate content

Step 4: Send email response

What you should actually use (real advice)

- **Text / coding** → CRTF or SPEC
- **Images** → SCENE (if you want control), SREF (if quick)
- **Video** → MOTION
- **Cinematic loops** → SCAMPS
- **Automation (n8n)** → ReAct flow

Universal “Pro” Template (works everywhere)

Subject: [main focus]

Context/Environment: [where]

Action: [what happens]

Style: [visual/audio style]

Camera/Format: [how it's presented]

Effects: [extra details]

Constraints: [rules]
